

Nitrocellulose Products

Tried and True • Our single-component product line of nitrocellulose technology has withstood the test of time. Their ease of use, superior flexibility and high build make them perfect for furniture, moldings and all commodity based production. These products are specifically designed to help assure adhesion in the kinds of multi-step systems used for years in the furniture industry.

● Chemlack

Chemlack has been a permanent fixture for decades in high-production facilities throughout the world. Quick drying with great workability, they have excellent flow characteristics designed to work within your environment. When dry times are critical, it's recommended to use these products with Chemseal sealers that have been designed for speed. They are easily repairable and consistently deliver great results. Chemlack products are available as clear or pigmented lacquers.

● Chemprime

Chemprime is a high build primer that delivers exceptional sanding and fill characteristics. Available in Black, White and Neutral this base can be tinted or used as is to deliver quick dry and easy sanding. Chemprime is used when economy and speed are essential in your solid colour projects.

● Chemseal

This nitrocellulose sealer comes ready to use in a fast dry, quick build, easy-to-sand formulation. Chemseal is designed to deliver user-friendly performance under our full range of Chemlack products.
